For the USA

FEDERAL COMMUNICATIONS COMMISSION RADIO FREQUENCY INTERFERENCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Unauthorized changes or modification to this system can void the users authority to operate this equipment.

For Canada

CLASS A

This Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

NOTICE

CLASSE A AVIS

Cet appareil numérique de la classe A respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

WARNING

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

NOTICE

Grounding Instructions

Do not modify the plug provided - if it will not fit the outlet, have the proper outlet installed by a qualified electrician.

Check with qualified electrician or service personnel if the grounding instructions are not completely understood, or if in doubt as to whether the tool is properly grounded.

Use only 3-wire extension cords that have 3-prong grounding plugs and 3-pole receptacles that accept the tool's plug.

Repair or replace damaged or worn out cord immediately.

To Ensure Safe Use

Improper handling or operation of this machine may result in injury or damage to property. Points which must be observed to prevent such injury or damage are described as follows.

About AWARNING and ACAUTION Notices

Used for instructions intended to alert the user to the risk of death or severe injury should the unit be used improperly.
 Used for instructions intended to alert the user to the risk of injury or material damage should the unit be used improperly. * Material damage refers to damage or other adverse effects caused with respect to the home and all its furnishings, as well to domestic animals or pets.

About the Symbols

The \triangle symbol alerts the user to important instructions or warnings. The specific meaning of the symbol is determined by the design contained within the triangle. The symbol at left means "danger of electrocution."
The \bigcirc symbol alerts the user to items that must never be carried out (are forbidden). The specific thing that must not be done is indicated by the design contained within the circle. The symbol at left means the unit must never be disassembled.
The \bigcirc symbol alerts the user to things that must be carried out. The specific thing that must be done is indicated by the design contained within the circle. The symbol at left means the power-cord plug must be unplugged from the outlet.

🗥 Incorrect operation may cause injury

Exercise caution to avoid being pinched or becoming caught.

Inadvertent contact with certain areas may cause the hand or fingers to be pinched or become caught. Use care when performing operations.

Never attempt operation while wearing a necktie, necklace, or loose clothing. Bind long hair securely.

Such items may become caught in the machine, resulting in injury.

Conduct operations in a clean, brightly lit location.

Working in a location that is dark or cluttered may lead to an accident, such as becoming caught in the machine as the result of an inadvertent stumble.

Never climb or lean on the machine.

The machine is not made to support a person. Climbing or leaning on the machine may dislodge components and cause a slip or fall, resulting in injury.

🗥 Danger of electrical short, shock, electrocution, or fire

Connect to an electrical outlet that complies with this machine's ratings (for voltage, frequency, and current).

Incorrect voltage or insufficient current may cause fire or electrical shock.

Never use out of doors or in any location where exposure to water or high humidity may occur. Never touch with wet hands. Doing so may result in fire or electrical shock.

Never allow any foreign object to get inside. Never expose to liquid spills.

Inserting objects such as coins or matches or allowing beverages to be spilled into the ventilation ports may result in fire or electrical shock. If anything gets inside, immediately disconnect the power cord and contact your authorized Roland DG Corp. dealer.

Never place any flammable object nearby. Never use a combustible aerosol spray nearby. Never use in any location where gases can accumulate.

Combustion or explosion may be a danger.

Handle the power cord, plug, and electrical outlet correctly and with care. Never use any article that is damaged.

Using a damaged article may result in fire or electrical shock.

When using an extension cord or power strip, use one that adequately satisfies the machine's ratings (for voltage, frequency, and current).

Use of multiple electrical loads on a single electrical outlet or of a lengthy extension cord may cause fire.

Connect to ground.

This can prevent fire or electrical shock due to current leakage in the event of malfunction.

Position so that the power plug is within immediate reach at all times.

This is to enable quick disconnection of the power plug in the event of an emergency. Install the machine next to an electrical outlet. Also, provide enough empty space to allow immediate access to the electrical outlet.

If sparking, smoke, burning odor, unusual sound, or abnormal operation occurs, immediately unplug the power cord. Never use if any component is damaged.

Continuing to use the machine may result in fire, electrical shock, or injury. Contact your authorized Roland DG Corp. dealer.

🗥 Important notes about the power cord, plug, and electrical outlet

Never place any object on top or subject to damage.

Never bend or twist with undue force.

Never pull with undue force.

Never allow to get wet.

Never make hot.

Dust may cause fire.

Never bundle, bind, or roll up.

1 Ink, maintenance liquid, and discharged fluid are flammable and toxic

Keep open flame away from the work area. Ink and discharged fluid are flammable.

Never store ink, maintenance liquid, or discharged fluid in any of the following locations.

- > Any location exposed to open flame
- Any location where high temperature may occur
- Near bleach or any other such oxidizing agent or explosive material
- Any location within the reach of children

Fire may be a danger. Accidental ingestion by children may pose a health hazard.

Never place an ink cartridge in fire. Ink may flow out, catch fire, and spread fire to other nearby objects.

Never drink or sniff ink, maintenance liquid, or discharged fluid, or allow them to come in contact with the eyes or skin. Doing so may be hazardous to the health.

Ensure adequate ventilation for the work area.

Failing to perform ventilation may result in a health hazard or danger of combustion due to ink fumes.

Never allow an ink cartridge to be subjected to impact, and never attempt to disassemble. Ink may leak.

▲ In the event of ingestion or physical distress

- > In the event of contact with the eyes, immediately flush with water for at least 15 minutes. If eye irritation continues, seek treatment by a physician.
- In the event of contact with skin, immediately wash with soap. If irritation or inflammation occur, seek treatment by a physician.
- In the event of ingestion, do not induce vomiting, and immediately seek treatment by a physician. Forcibly inducing vomiting may lead to danger of choking.
- > If odor leads to physical distress, move to a well-ventilated location and rest quietly. If dizziness or nausea persists, seek treatment by a physician.

1220 Ib.). Media weighs 100 kg (1550 Ib.). Media weighs 100 kg (220 Ib.)

⚠WARNING

Entrust operations such as transportation, unloading, and emplacement to trained workers.

Handling requires special equipment and training. Performing operations in an unreasonable manner may result in a major accident.

Install the machine in a location that is level, stable, and able to bear the weight of the machine.

The total weight of the machine may reach 700 kg (1550 lb.) or more. Installation in an unsuitable location may cause a major accident, including tipover, fall, or collapse.

Be sure to anchor the stand to the floor.

If the machine should begin to topple, a major accident may result, including crushing of the appendages or the body.

When loading or moving roll media, use lifting equipment, and exercise care to prevent falls.

Attempting manual lifting of heavy media that taxes your strength may cause physical injury. Also, if dropped, such items may cause injury.

When storing roll media, implement adequate safety measures to ensure that the stored media will not roll, fall, or topple over.

Danger exists of becoming pinned under the media and suffering serious injury.

A Danger of fire, burns, or toxic gas emissions

Caution: high temperatures.

Areas such as the dryer become hot. Exercise caution to avoid fire or burns.

When printing is not being performed, remove any loaded media or switch off the power.

The continued application of heat at a single location may cause the release of toxic gases from the media or pose a fire hazard.

Never use media that cannot withstand heat.

Doing so may degrade the media, or may result in fire or the release of toxic gases.

Marning Labels

Warning labels are affixed to make areas of danger immediately clear. The meanings of these labels are as follows. Be sure to heed their warnings.

Also, never remove the labels or allow them to become obscured.

Caution: Moving Print Heads

The print heads inside the cover move at high speed and pose a hazard. Never insert the hand or fingers into the gap.

Flammable

Ink and discharged fluid are flammable. Keep away from open flame.

Ink Is Toxic

Ink and discharged fluid are toxic. Avoid contact with the body. Use only in a wellventilated area.

Caution: High Temperature

The platen and dryer become hot. Exercise caution to avoid fire or burns.

Caution: Pinching Hazard Be careful not to allow the fingers to

become pinched when closing the cover.

Caution: High Temperature The platen and dryer become hot. Exercise caution to avoid fire or burns.

Caution: Pinching Hazard

Be careful not to allow the fingers to become pinched when loading media or closing covers.

La manipulation ou l'utilisation inadéquates de cet appareil peuvent causer des blessures ou des dommages matériels. Les précautions à prendre pour prévenir les blessures ou les dommages sont décrites ci-dessous.

Avis sur les avertissements

	Utilisé pour avertir l'utilisateur d'un risque de décès ou de blessure grave en cas de mauvaise utilisation de l'appareil.
APRUDENCE	Utilisé pour avertir l'utilisateur d'un risque de blessure ou de dommage matériel en cas de mauvaise utilisation de l'appareil. * Par dommage matériel, il est entendu dommage ou tout autre effet

À propos des symboles

Le symbole \triangle attire l'attention de l'utilisateur sur les instructions importantes ou les avertissements. Le sens précis du symbole est déterminé par le dessin à l'intérieur du triangle. Le symbole à gauche signifie "danger d'électrocution".
Le symbole 🚫 avertit l'utilisateur de ce qu'il ne doit pas faire, ce qui est interdit. La chose spécifique à ne pas faire est indiquée par le dessin à l'intérieur du cercle. Le symbole à gauche signifie que l'appareil ne doit jamais être démonté.
Le symbole Prévient l'utilisateur sur ce qu'il doit faire. La chose spécifique à faire est indiquée par le dessin à l'intérieur du cercle. Le symbole à gauche signifie que le fil électrique doit être débranché de la prise.

🗥 L'utilisation incorrecte peut causer des blessures

S'assurer de suivre les procédures d'utilisation décrites dans la documentation. Ne jamais permettre à quiconque ne connaît pas le fonctionnement ou la manutention de l'appareil de le toucher. L'utilisation ou la manutention incorrectes peuvent causer un accident.

0

Garder les enfants loin de l'appareil. L'appareil comporte des zones et des composants qui présentent un danger pour les enfants et qui pourraient causer des blessures, la cécité, la suffocation ou d'autres accidents graves.

Ne jamais faire fonctionner l'appareil après avoir consommé de l'alcool ou des médicaments, ou dans un état de fatigue. L'utilisation de l'appareil exige un jugement sans faille. L'utilisation avec les facultés affaiblies pourrait entraîner un accident.

Ne jamais utiliser l'appareil à des fins autres que celles pour lesquelles il est conçu. Ne jamais l'utiliser de manière abusive ou d'une manière qui dépasse sa capacité.

Le non-respect de cette consigne peut causer des blessures ou un incendie.

Utiliser uniquement des accessoires d'origine (accessoires en option, articles consommables, adaptateur CA, câble d'alimentation et autres articles semblables), compatibles avec l'appareil. Les articles incompatibles risquent de causer des accidents.

0

Suivre les instructions données dans ce guide pour le nettoyage, l'entretien, l'installation ou le retrait des accessoires en option.

La manipulation ou l'utilisation incorrectes risquent de causer des blessures ou un choc électrique.

Ne jamais tenter de démonter, de réparer ou de modifier l'appareil.

Le non-respect de cette consigne risque de provoquer un incendie, un choc électrique ou des blessures. Confier les réparations à un technicien ayant la formation requise.

Faire preuve de prudence pour éviter l'écrasement ou le coincement.

La main ou les doigts peuvent être écrasés ou coincés s'ils entrent en contact avec certaines surfaces par inadvertance. Faire preuve de prudence pendant l'utilisation de l'appareil.

Ne jamais faire fonctionner l'appareil si on porte une cravate, un collier ou des vêtements amples. Bien attacher les cheveux longs.

Ces vêtements ou ces objets peuvent être coincés dans l'appareil, ce qui causerait des blessures.

Utiliser l'appareil dans un endroit propre et bien éclairé.

Travailler dans un endroit sombre ou encombré peut causer un accident; l'utilisateur risque, par exemple, de trébucher malencontreusement et d'être coincé par une partie de l'appareil.

Ne jamais grimper ni s'appuyer sur la machine.

La machine n'est pas conçue pour supporter le poids d'une personne. Grimper ou s'appuyer sur la machine peut déplacer des éléments et causer un faux pas ou une chute, ce qui causerait des blessures.

▲ Risque de décharge ou de choc électrique, d'électrocution ou d'incendie

ATTENTION

Brancher à une prise électrique conforme aux caractéristiques de cet appareil (tension, fréquence et courant).

Une tension incorrecte ou un courant insuffisant peuvent causer un incendie ou un choc électrique.

Ne jamais utiliser à l'extérieur ni à un endroit où l'appareil risque d'être exposé à de l'eau ou à une humidité élevée. Ne jamais toucher l'appareil avec des mains mouillées.

Le non-respect de cette consigne risque de provoquer un incendie ou un choc électrique.

Ne jamais insérer d'objet étranger dans l'appareil. Ne jamais exposer l'appareil aux déversements de liquides.

L'insertion d'objets comme des pièces de monnaie ou des allumettes, ou le déversement de liquides dans les orifices de ventilation peuvent causer un incendie ou un choc électrique. Si un objet ou du liquide s'infiltre dans l'appareil, débrancher immédiatement le câble d'alimentation et communiquer avec le représentant Roland DG Corp. autorisé.

 \bigcirc

Ne jamais placer d'objet inflammable à proximité de l'appareil. Ne jamais utiliser de produit inflammable en aérosol à proximité de l'appareil. Ne jamais utiliser l'appareil dans un endroit où des gaz peuvent s'accumuler.

Une combustion ou une explosion pourraient se produire.

Manipuler le câble d'alimentation, la fiche et la prise électrique correctement et avec soin.

Ne jamais utiliser un article endommagé, car cela pourrait causer un incendie ou un choc électrique.

Si une rallonge ou une bande d'alimentation électrique sont utilisées, s'assurer qu'elles correspondent aux caractéristiques de l'appareil (tension, fréquence et courant).

L'utilisation de plusieurs charges électriques sur une prise unique ou une longue rallonge peut causer un incendie.

Mise à la terre.

La mise à la terre peut prévenir un incendie ou un choc électrique dus à une fuite de courant en cas de défaillance.

Placer l'appareil de façon à ce que la fiche soit facile d'accès en tout temps.

Ainsi, l'appareil pourra être débranché rapidement en cas d'urgence. Installer l'appareil près d'une prise électrique. En outre, prévoir suffisamment d'espace pour que la prise électrique soit facile d'accès.

S'il se produit des étincelles, de la fumée, une odeur de brûlé, un bruit inhabituel ou un fonctionnement anormal, débrancher immédiatement le câble d'alimentation. Ne jamais utiliser si un composant est endommagé.

Continuer à utiliser l'appareil peut causer un incendie, un choc électrique ou des blessures. Communiquer avec le représentant Roland DG Corp.Autorisé.

🕂 Remarques importantes à propos du câble d'alimentation, de la fiche et de la prise électrique

Ne jamais déposer aucun objet sur le câble, sur la fiche ou sur la prise car cela risque de les endommager.

Ne jamais plier ni tordre le câble avec une force excessive.

Ne jamais tirer sur le câble ou la fiche avec une force excessive.

Ne jamais plier ni enrouler le câble.

Ne jamais laisser l'eau toucher le câble, la fiche ou la prise.

Ne jamais chauffer le câble, la fiche ou la prise.

La poussière peut causer un incendie.

L'encre, le liquide de nettoyage ou d'entretien et les liquides usés sont inflammables et toxiques.

ATTENTION

Ne pas approcher une flamme nue de l'espace de travail.

L'encre et les liquides usés sont inflammables.

Ne jamais entreposer d'encre, de liquide de nettoyage ou d'entretien ni de liquides usés dans les endroits suivants :

un endroit exposé à une flamme nue;

 un endroit où il y a risque de température élevée;

près d'eau de Javel, d'un autre agent d'oxydation ou de matériel explosif;

 > tout endroit à la portée d'enfants.
 Il y a risque d'incendie. L'ingestion accidentelle par un enfant peut présenter un risque pour la

santé.

Ne jamais incinérer une cartouche d'encre.

De l'encre pourrait couler, s'enflammer et le feu se répandre à des objets proches.

Ne jamais boire l'encre, le liquide de nettoyage ou d'entretien ni les liquides usés, ne pas en respirer les vapeurs et ne pas laisser ces produits entrer en contact avec les yeux ou la peau.

Cela est dangereux pour la santé.

Λ En cas d'ingestion ou de trouble physique

- En cas de contact avec les yeux : rincer immédiatement et abondamment à l'eau courante pendant au moins 15 minutes. Si les yeux sont toujours irrités, consulter un médecin.
- En cas de contact avec la peau : laver immédiatement à l'eau et au savon. En cas d'irritation ou d'inflammation de la peau : consulter un médecin.
- En cas d'ingestion : ne pas provoquer le vomissement et demander immédiatement l'aide d'un médecin. Provoquer le vomissement peut créer un risque de suffocation.
- Si l'odeur cause un trouble physique, amener la personne dans un endroit bien aéré et la faire se reposer. Si l'étourdissement ou la nausée persistent, consulter un médecin.

S'assurer que le lieu de travail est bien aéré.

L'absence d'aération adéquate peut créer une situation dangereuse pour la santé ou un risque de combustion à cause des vapeurs qui émanent de l'encre.

Ne jamais soumettre une cartouche d'encre à des chocs. Ne jamais tenter d'ouvrir une cartouche d'encre. De l'encre pourrait s'échapper.

⚠ Le poids de cet appareil est de 700 kg (1550 lb.) Le poids du support est de 100 kg (220 lb.)

Confier les opérations comme le transport, le déchargement et la mise en place à des travailleurs qui ont reçu la formation requise.

La manutention exige de la formation et de l'équipement spécialisés. Tenter de procéder à ces opérations de manière intempestive peut provoquer un accident grave.

Installer l'appareil à un endroit stable et plat et capable de supporter son poids. Le poids total de l'appareil peut être d'au moins 700 kg (1550 lb.). Installer l'appareil à un endroit inapproprié peut provoquer un accident grave comme le renversement, la chute ou l'écrasement.

S'assurer d'ancrer la base de l'appareil au sol.

Si l'appareil devait commencer à basculer, il s'ensuivrait un accident grave, par exemple l'écrasement de membres ou du corps.

Lors du chargement ou du déplacement de support en rouleau, utiliser de l'équipement de levage et faire preuve de prudence pour éviter les chutes.

Tenter de soulever manuellement des objets trop lourds peut causer des blessures. En outre, si ces objets sont échappés, ils peuvent causer des blessures.

Prendre les mesures de sécurité adéquates pour l'entreposage des rouleaux de support pour s'assurer qu'ils ne rouleront pas, ne tomberont pas et ne se renverseront pas.

Il y a risque d'être écrasé par le support et de subir des blessures graves.

🕂 Risque d'incendie, de brûlures ou d'émissions de gaz toxiq

Attention : températures élevées.

Les zones comme le séchoir chauffent. Faire preuve de prudence pour éviter un incendie ou des brûlures.

Quand aucun travail d'impression n'est en cours, retirer tout support de l'appareil ou couper l'alimentation électrique.

L'application continue de chaleur à un point unique peut causer l'émission de gaz toxiques ou créer un risque d'incendie.

Ne jamais utiliser un support qui ne peut pas supporter la chaleur.

L'utilisation d'un support qui ne supporte pas la chaleur peut détériorer le support, créer un risque d'incendie ou causer l'émission de gaz toxiques.

🗥 Vignettes d'avertissement

Des vignettes d'avertissement sont apposées pour qu'il soit facile de repérer les zones dangereuses. La signification des vignettes est donnée ci-dessous. Respecter les avertissements. Ne jamais retirer les vignettes et ne pas les laisser s'encrasser.

Attention : Têtes d'impression mobiles Les têtes d'impression sous le couvercle se déplacent à haute vitesse et représentent un danger. Ne jamais insérer la main ou les doigts dans l'ouverture.

Inflammable

L'encre et les liquides usés sont inflammables. Les garder loin de toute flamme nue.

L'encre est toxique

L'encre et les liquides usés sont toxiques. Éviter tout contact avec le corps. Utiliser uniquement dans un endroit bien aéré.

Attention : Température élevée

La platine et la surface de séchage chauffent. Être prudent pour éviter un incendie ou des brûlures.

Attention : Risque de pincement Faire attention de ne pas coincer les doigts lors de la fermeture du couvercle.

This machine is a precision device. To ensure the full performance of this machine, be sure to observe the following important points. Failure to observe these may not only result in loss of performance, but may also cause malfunction or breakdown.

Printer unit

This Machine Is a Precision Device

- > Handle carefully, and never subject the machine to impact or excessive force.
- > Never needlessly put your hand or fingers inside the cover, the ink-cartridge ports, or other internal areas of the machine.

Install in a Suitable Location

- > Install in a location having the specified temperature and relative humidity.
- >Install in a quiet, stable location offering good operating conditions.

Leave the Main Power on at All Times

> To keep the print heads from drying out, keep the main power switched on at all times, even when you're not using the machine. For more information about switching the power on and off, read this manual carefully and carry out the operation properly.

The Print Heads Are Delicate

- > Never needlessly touch or allow media to scrape them. Failure to handle with care may cause damage.
- > The print heads may be damaged if allowed to dry out. The machine prevents desiccation automatically, but improper operation may render this feature inoperative. Operate properly, as specified in this manual.
- > Never allow the machine to stand with an ink cartridge removed. Remaining ink in the printer may harden and clog the print heads.
- > The print heads are components that wear out. Periodic replacement is required, with the frequency of replacement depending on use.

This Machine Becomes Hot

> Never cover the ventilation holes with cloth, tape, or anything else.

When Moving the Machine

> Special preparations are required when moving the machine. Please check with your authorized Roland DG Corp. dealer ahead of time.

Ink cartridges

Ink Cartridges Come in Various Types

> Use a type that is compatible with the printer. Also, be sure to use only genuine items from Roland DG Corp.

Never Subject to Impact or Attempt to Disassemble

> Never drop or shake forcefully. The impact may rupture the internal pouch and cause the ink to leak.

- > Never attempt to disassemble.
- > Never attempt to refill the ink.
- > If ink gets on your hands or clothing, wash it off as soon as possible. Removal may become difficult if allowed to stand.

Storage

> Store unopened in a well-ventilated location at a temperature of -20 to 40° C (-4 to 104° F).

Chapter 1 Introduction

1-1 Machine Features

This machine is a high-speed, grand-format printer compatible with media having a width of 104 inches.

- > It provides ample image quality for large outdoor signs and the like even in its fastest mode, demonstrating high practicality and productivity.
- > The media take-up and feed systems and the media heating system are provided with the standard features that high-speed, high-volume printing requires.
- > The machine is capable of high-density printing on outdoor-advertisement media, so it can achieve high weatherability even with the ink-jet system it uses.
- A self-cleaning feature performs automatic cleaning for the print heads, reducing the time and effort of daily maintenance. Other considerations enhance ease of use, including a preset feature that lets you save mediaspecific settings.

Platen

This is the path over which the media passes. A suction fan that keeps the media from coming loose and a preheater and print heater that help fix the ink are built in.

Media Clamps

These keep the media from coming loose and prevent fuzz on the cut edge of the media from touching the print heads.

Pinch Rollers

These clamp the media when the loading lever is pulled back toward you.

Grit Rollers

These rollers feed out media toward the front of the machine.

Chapter 2 Operation

Switching the Power On and Off

This machine has four power switches. You switch on all four when using the machine.

When you finish printing, you turn off switches ③ and ④ as required. You also flip down the loading lever to the rear of the machine.

Leave the two main power switches (① and ②) on at all times, never switching either one off. (The machine monitors the print heads for dryness and automatically performs cleaning while switched on.)

When printing is not being performed, remove any loaded media or switch off the power.

The continued application of heat at a single location may cause the release of toxic gases from the media or pose a fire hazard.

Be sure to leave switched on at all times.

Important Note on Switching Off the Power

Never switch off the printer's main power or unplug the power cord suddenly while operation is in progress. Doing so may damage the print heads. To turn off the power, switch off only the sub power (except when you're performing tasks such as moving the machine). If the main power is accidentally switched off, immediately turn the main power and sub power back on.

The Power-saving Feature

This machine is provided with a power-saving feature that switches to a low-power "sleep mode" when a fixed interval passes with no operation. The factory default for the time after which the machine switches to the sleep mode is 30 minutes.

You can change the setting for the time of the shift to the sleep mode. You can also switch off the power-saving feature.

- ${\mathscr T}$ p 93 "Setting the Interval until Activation of the Sleep Mode"
- P 93 "Deactivating the Sleep Mode"

When the machine is in the sleep mode, the sub power switch flashes slowly and the media heating system stops. Using the control panel or performing operations such as sending printing data from the computer (when media is loaded) restore the machine to its normal mode.

To reduce power consumption and prevent problems such as overheating, we recommend leaving the power-saving feature on and setting the activation time for the sleep mode to 30 minutes or less.

How to Load Media

≜WARNING	When loading or moving roll media, use lifting equipment, and exercise care to prevent falls. Attempting manual lifting of heavy media that taxes your strength may cause physical injury. Also, if dropped, such items may cause injury.
	Never load media that weighs more than 100 kg (220 lb.) . The machine may fail to withstand the weight and tip over or cause the media to fall.
∆CAUTION	Be sure to perform operations as specified by these instructions, and never touch any area not specified in the instructions. Sudden movement of the machine may cause injury.

Read This First

To achieve maximum performance from the machine, the media must be loaded correctly. Incorrect loading may result in poor printing results or cause the media to become crooked.

P 109 "Attractive Printing Is Impossible," p 112 "The Media Cannot Be Taken Up Smoothly," p 113 "Media Wrinkles or Shrinks, or Feed Is Unstable"

Correctly Loaded Media

In order to load media correctly as shown in the figure, be sure to observe the following:

Use a media gauge.

When mounting the roll shaft, be sure to use the included media gauge. This is for loading media so that it is positioned evenly on the left and right.

You also use the media gauge when making sure that the left and right edges each lie on a straight line.

Narrow-width media cannot be used. / For wide media, use the reinforcement pipe.

- Never use media less than 1,220 mm (48 inches) in width. Doing so may result in incorrect media movement, or malfunction or damage to the machine.
- When using media having a width of 1,880 mm (74 inches) or more, make use of the reinforcement pipe. It reduces sagging of the roll media.

When passing media through the printer, feed the media through while pressing down on it at the center.

When passing media through the printer, be sure to press down on the media at the center with two hands and slowly push (or pull) the media through. This is done in order to load the media so that it lies straight with respect to the direction of feed.

- If the surface of the media is slippery, use rubber finger caps or the like to maintain a firm grip and keep the media from slipping out of your hands.

 When feeding in from the back of the printer

 When pulling out from the front of the printer
- Never pull the left and right edges of the media. Doing so may cause the media to be pulled out at an angle, making it impossible to load the media so it lies straight. Carrying out printing when the media is loaded at an angle, as shown in the figure, may not only cause poor printing results, but may cause the media to become crooked or jam.

Never feed the media through using the media take-up and feed systems.

When loading media, never feed the media through using the MANUAL switch on the media take-up and feed systems. Doing so may cause the media to become crooked or jam.

1. Mount the media and the paper pipe on the roll shaft.

Dead the media onto the roll shaft.

For a media width of 2,500 mm
Ø Mount the roll shaft in the paper pipe.

Never overly loosen the screws for the end caps.

When an end cap screw is loosened completely, it stops turning. Never apply more force beyond that point. Attempting to turn the screw with undue force may damage the component securing the screw, making return to the original state impossible.

When the take-up unit begins to take up the media, release the dancer roller and feed the media a little at a time.

After taking up the media for one turn or more, check to make sure the two edges of the media are aligned with the guide marks on the paper pipe.

When you begin take-up, take care to ensure that the end of the media does not become rolled or creased.

www.uzywane-solwentowe.pl Chapter 2 Operation

Never pull the media with excessive force.

Never attempt any operation that pulls the media with excessive force, like the ones shown below. Doing so may activate a protective feature and result in an error.

- > Never operate the MANUAL switch for the media take-up and feed systems when the loading lever has been pulled back.
- >Never use \frown to feed the media in reverse.
- > Never move the media with \bigcirc continuously for more than one minute.

Never needlessly touch the dancer rollers.

Sudden movement of the media take-up or feed system may cause injury.

How to Cut Off Media

CAUTION The cutter knife used here is sharp and poses a hazard. Carry out operations with caution to avoid injury.

Cut off the media along the knife guide, using a retractable knife or the like.

2-3 Settings of the Media Heating System

What Is the Media Heating System?

This machine is equipped with a media heating system that warms the media. You use this mainly to improve ink adhesion and dry the ink.

The media heating system is composed of the three devices shown in the figure below.

	Preheater This device war	ms the media before printing.
	Print heater This device is us	sed mainly to improve ink adhesion.
	Dryer (drying You use this to s Drying heate This warms t Blower fan This blows n dia after prin	g heater and blower fan) speed up drying of the ink. the media after printing. hoving air onto the surface of the me- thing. (Blower fan) (Drying heater)
∕ ∿ ₩#	ARNING	Caution: high temperatures. The platen and dryer become hot. Exercise caution to avoid fire or burns.
∕ ∿ ₩#	ARNING	Remove any loaded media or switch off the sub power when printing is not being performed. The continued application of heat at a single location may cause fire or produce toxic gases.
∕ ∿ ₩#	ARNING	Never use media that cannot withstand the heat. Doing so may result in fire or the release of toxic gases, or may degrade the media.
≜WARNING		Never use the platen or dryer for any purpose for which they are not intended, such as to dry clothing. Doing so may cause overheating, resulting in fire or accident.

Making the Temperature Setting for the Media Heating System

Procedure

By default, simply switching on the power does not make the machine warm up to the preset temperature. Pressing (SET UP) to make the light come on makes them to warm up to the preset temperature.

General Guide for the Preset Temperatures

The optimal temperature for the media heating system varies according to such factors as the type of media and differences in the print mode. Use the following as a general guide and adjust accordingly.

General Guide for Adjustment

Preheater

Set this to a temperature that is the same as or lower than the temperature of the print heater. You use the preheater mainly to heat media gradually. This is because media becomes more likely to shrink or wrinkle if heated suddenly.

Print heater

You use this mainly to improve ink adhesion and inhibit smudging.

If the ink forms lumps or smudges, raise the temperature. Note, however, that a temperature that is too high may degrade the media or cause it to wrinkle.

Dryer

When ink drying is poor, raise the temperature. Note, however, that a temperature that is too high may degrade the media or cause it to wrinkle.

The relationship between the print mode and temperature

If smudging or poor drying occur even after raising the temperature, try using a print mode offering higher image quality. Conversely, when you want to use a faster print mode, raise the temperature.

Amount of ink

When you change the amount of ink using the settings for your RIP program, adjusting this may yield better results. If problems such as smudging persist even after raising the temperature, try reducing the amount of ink.

Examples of Preset Temperatures

Media	Temperature
Type: Scrim banner (PVC) Thickness: 300 to 400 μm (12 to 16 mil)	Preheater: 40°C (104°F) Print heater: 40°C (104°F) Dryer: 50°C (122°F)
Type: Marking film (PVC, with adhesive) Thickness: 60 to 100 μm (2.5 to 4 mil, not including backing paper)	Preheater: 35°C (90°F) Print heater: 35°C (90°F) Dryer: 45°C (112°F)

> These are only rough estimates. Make adjustments to match the media you're using.

Using the media heating system does not necessarily make it possible to apply ink to every kind of media. Be sure to test in advance.

> Results may vary greatly depending on the print mode and other factors. Make settings suited to the media.

> When suggested settings for temperature, print mode, and other values are given, use the suggested settings.

Getting Ready to Receive Data from a Computer

When you have finished loading media and making the temperature settings for the media heating system, then follow the steps below. This procedure enables the machine to receive data from the computer and perform printing.

Procedure

Printing Is Not Possible in These Situations

- The machine does not run when the front cover is open. Also, never open it when printing is in progress. Doing so interrupts printing.
- > Data from the computer is not accepted when (setup) is dark.
- > (SET UP) does not light up when media is loaded incorrectly.
- > Printing does not start until (HEATER CONFIG) lights up.
- > Data from the computer is not accepted when you are not at the top menu.

Printing Tests and Cleaning

We recommend performing a printing test to check for problems such as dot drop-out before you carry out actual printing. If problems such as dot drop-out are found, clean the print heads.

How to Perform a Printing Test

Holding down (TEST PRINT) for one second or longer prints a test pattern.

You can print the test pattern where you want by using \checkmark \checkmark to move the print heads, then pressing The front cover may be open during movement, but be sure to close it before you press .

How to Perform Cleaning

When a printing test reveals dot drop-out or the like, perform cleaning for just the head that is incapable of correct printing. Compared with performing cleaning for all heads, this can reduce the amount of ink consumed.

Procedure

☞ p 62 "When Head Cleaning Is Not Effective"

When you want to clean all heads simultaneously

Hold down (CLEANING) for one second or longer. Cleaning for all heads starts automatically.

Checking for Remaining Ink

Procedure

The display shows an approximate guide to the amount of remaining ink, which may differ somewhat from the actual amount remaining.

When Ink Cartridges Become Empty

When an ink cartridge is empty, a warning beep sounds and a screen like the one shown in the figure appears.

Replace the cartridge immediately. Replacement is possible even while printing is in progress. When an ink cartridge becomes empty while printing is in progress, printing does not stop immediately. A certain amount of ink still remains inside the machine, and printing continues until this ink runs out.

Procedure

- Ø Pull out the empty cartridge and immediately insert the new one.
 - \succ Keep the side with the arrow face up.
 - > Insert and remove slowly, one at a time.
 - ≻ Insert firmly, until you hear a beep.

Close the cartridge-slot cover.

Replace Cartridges Before Ink Runs Out

If ink runs out completely, printing pauses.

When you replace a cartridge with a new one, printing resumes after about one minute, but a difference in color may be apparent at the seam between the locations where printing paused and resumed. Be sure to replace cartridges before ink runs out.

Important Notes on Replacing Cartridges

- Be sure to replace with an item of identical type. Never mix items of different types.
- Be sure to replace with a new cartridge. Never insert a partially used ink cartridge. Inserting a partially used cartridge makes the message shown at right appear. Immediately remove the cartridge and replace it with a new one.

DO NOT INSERT USED CARTRIDGE

┛

- > Never allow the machine to stand with an ink cartridge removed. The print heads may become clogged.
- > Be sure to carry out replacement according to the instructions given in this manual.
- > Never remove a cartridge while the sub power is switched off. Doing so may cause ink to leak or spill.

Never store ink, maintenance fluid, or discharged fluid in any of the following locations.

- > Any location exposed to open flame
- > Any location where high temperature may occur
- > Near bleach or any other such oxidizing agent or explosive material
- > Any location within the reach of children

Fire may be a danger. Accidental ingestion by children may pose a health hazard.

Dispose of discharged fluid properly, in accordance with the laws in effect in your locale.

Discharged fluid is flammable and contains toxic ingredients. Do not attempt to incinerate discharged fluid or discard it with ordinary trash. Also, do not dispose of it in sewer systems, rivers, or streams. Doing so may have an adverse impact on the environment.

Cleaning

Never use gasoline, alcohol, thinner, or any other flammable material. Doing so may cause fire.

Before attempting cleaning, switch off the sub power and wait until the platen and dryer cool (approximately 30 minutes). Sudden movement of the machine may cause injury, or hot components may cause burns.

> This machine is a precision device, and is sensitive to dust and dirt. Perform cleaning on a daily basis.

> Clean by wiping with a cloth moistened by neutral detergent diluted with water then wrung dry.

> Never attempt to oil or lubricate the machine.

Care and Maintenance of the Print Heads

Daily Care and Maintenance

To prevent the print heads from drying out or clogging, this machine automatically performs cleaning of the print heads (using its self-cleaning feature).

The machine automatically determines the interval for performing self-cleaning, based on factors such as the ambient temperature. However, this interval can also be changed by you.

Periodic Care and Maintenance

Periodic care is essential to ensuring optimal printing at all times. Based on your frequency of use, periodically clean the heads using a cleaning kit.

 ${\displaystyle { \ensuremath{ @ r} }} p \ 64 \;$ "Cleaning the Heads Using the Cleaning Kit"

Note: The print heads are components that wear out. Periodic replacement is required, with the frequency of replacement depending on use. Purchase them from your authorized Roland DG Corp. dealer.

Performing More Powerful Cleaning

When the problems such as dot drop-out are not cleared up by the "normal cleaning," try the more forceful "powerful cleaning." Note, however, that this consumes more ink than "normal cleaning," and too-frequent use may damage the print heads themselves. Avoid using it more than necessary.

In the same way as for normal cleaning, choose and clean only heads that are incapable of correct printing.

Procedure

When Powerful Cleaning Is Not Effective

If problems such as dot drop-out persist even after you have performed powerful cleaning several times, then use the cleaning kit to clean the heads. Such cleaning can be effective when carried out periodically, according to the frequency of use.

How to Perform Cleaning

Important Notes on This Procedure

- \succ To prevent the heads from drying out, finish this procedure in 10 minutes or less.
- > A warning beep sounds after 10 minutes. At this time, stop work, attach the right side cover, and press (NTER). When the head-protection operation finishes, restart the procedure from the beginning.
- > Never use any implement other than the included cleaning stick. Cotton swabs or other lint-producing items may damage the heads.
- > Never touch the nozzle surface of the heads.
- > Stroke the sponges very gently, applying as little pressure as possible. Never rub, scrape, or crush them.

Be sure to perform operations as specified by these instructions, and never touch any area not specified in the instructions. Sudden movement of the machine may cause injury.

1. Change to the print-head manual-cleaning mode.

Important Points to Observe

When the machine is not in use for a prolonged period, be sure to observe the following important points.

Keep the Main Power Switched On at All Times

When the main power is on, the machine performs cleaning of the print heads automatically to match the ambient temperature and humidity (self-cleaning feature). Leaving the main power switched off may result in hardening of the ink, clogging of the print heads, or other malfunction. Leave the main power switched on even when the machine is not in use. When circumstances compel you to switch off the main power, first consult your authorized Roland DG Corp. dealer.

Also, if a power outage or the like causes the main power to go off, switch the main power on again as soon as power is restored. Then repeat cleaning and printing tests until dot drop-out has been eliminated. If this does not resolve the problem, contact your authorized Roland DG Corp. dealer.

Keep at a Constant Temperature and Relative Humidity

Even when the machine is not in use, keep it at a temperature of 5 to 40°C (41 to 104°F) and a relative humidity of 20 to 80% (with no condensation). Temperatures that are too high may degrade the ink and cause malfunction.

Once a Week, Check the Amount of Ink and Maintenance Liquid Remaining

Self-cleaning uses up ink and maintenance liquid. If either one runs out completely, self-cleaning cannot be performed, which may result in clogging of the print heads or other malfunction. Check the amount remaining in the cartridges at least once a week. When the remaining amount displayed at the [INK REMAINING] menu is flashing, it means that the cartridge will become empty within a week. Replace the cartridge promptly.

- P 53 "Checking for Remaining Ink"
- P 54 "When Ink Cartridges Become Empty"

If a message appears

74

When the machine has been out of use for some time, if the message shown below remains displayed on the screen and a warning beep sounds, it means that ink or maintenance liquid has run out completely, and self-cleaning cannot be performed. Take action promptly. Failure to do so may result in clogging of the print heads or other malfunction.

When moving the machine to another location, consult your authorized Roland DG Corp. dealer.

Entrust operations such as transportation, unloading, and emplacement to trained workers.

Handling requires special equipment and training. Performing operations in an unreasonable manner may result in a major accident.

Canceling Printing Before It Finishes

Procedure

- 1 Press PAUSE .
- Hold down Set UP for one second or longer.
- 3 Stop sending printing data from the computer.

Description

PAUSE pauses printing. Pressing PAUSE a second time here resumes printing, but a horizontal stripe is produced at the location where printing was stopped. We do not recommend resuming printing.

Shifting the Print-start Position to the Rear

Procedure

Description

Using **v** to move the media lets you shift the print-start position toward the rear. Note, however, that moving the media a long distance with **v** may subject the machine to a large load. Never move continuously for more than one minute. Doing so may activate a protective feature and result in an error. Also, never use **a**. Doing so may cause the take-up unit to pull the media with undue force, resulting in an error or malfunction.

Shifting the Printing Position to the Left

Procedure

Description

You can shift the printing position to the left by using . Note, however that this setting must be made for each individual page. When the printing of one page finishes, the left-right positioning returns to its default value. When the position has been set, ight up and the screen displays the printable width at the set position. This feature is also available when printing various test patterns, and can help you use media with less waste. Note, however, that the left and right positions are not restored to their defaults for test patterns.

Saving Optimized Media Settings As Preset Values

Procedure

Description

Using the [PRESET] menu lets you easily change a wide variety of settings to optimize them for the media. Making changes for each menu item every time you change the media can be troublesome. That's why it can be useful to save the menu-item settings optimized for an often-used type of media as a preset. The next time you use the media, you can change the menu-item settings to the optimal values for the media simply by loading the preset you saved. You can group together the settings you've made at the menus shown below and save them as a preset.

Loading a Saved Preset

Procedure

0	MENU PRESET	↓	Press MENU.
2	LOAD NAME1	\$♪ ↓	Press → twice. Use → ▼ to select the name of a preset you want to load.
0	SETUP SHEET		Press (ENTER) to load. The settings are changed and the screen shown in the figure appears.

Description

This loads a saved preset. You can select any one of eight types of presets. (When no names have been assigned, you select from among NAME1 through NAME8.)

If you load a preset while (SETUP) is illuminated, (SETUP) goes dark. To start printing, press (SETUP) once more and redo the preparations for printing.

6	W 2600 mm SETUP SHEET		Press . Press I to go back to the original screen.

Description

This assigns a name to a saved preset. Using media names may aid recognition and clarity. The characters you can enter are "A" through "Z," "0" through "9," and the "-" character. You can enter up to 15 characters, including spaces.

Adjusting Head Height to Match Media Thickness

Procedure

Description

Depending on the media, media may wrinkle or come loose from the platen during printing, increasing the chance of contact with the print heads. When you are using such media, adjust the head height to "HIGH." Note that the height of the heads cannot be determined by just the thickness of the media.

When the height is set to "LOW," the media clamps cannot be used. Except in special cases, the "LOW" setting should never be used. Doing so may cause the heads to strike the clamps and become damaged.

Default Setting

[HEAD HEIGHT]: MIDDLE

Correcting for Misalignment in Bidirectional Printing

Procedure

Description

The bidirectional-printing mode (in which the heads perform printing during both their outbound pass and return pass) offers the advantage of being fast, but subtle misalignment occurs between the outbound and return passes. The procedure to correct this and eliminate misalignment is bidirectional correction. This misalignment varies according to the head height and the thickness of the media, so we recommend performing correction to match the media you're using.

Description

The movement distance of media experiences subtle changes due to the thickness of the media and the temperature of the media heating system. When the movement distance becomes discrepant, horizontal stripes are more likely to occur during printing. We recommend performing correction to match the media you're using and the media heating system. Repeat the process of printing a test pattern and entering a correction value a number of times to find the optimal value. It may also be a good idea to examine actual printing, and reduce the correction value if white horizontal stripes are prominent or increase the value if dark horizontal stripes are prominent.

Printing this test pattern using parameters identical to those for actual printing. Examples such as printing on media scraps may not yield correct results.

Note, however, that you can also make this setting on the computer (by, for example, choosing the media type in the RIP program you are using). Use this feature when you want to make the setting on the printer, without changing any settings on the computer. When you have made the setting on the computer, the computer's setting is used and the printer's setting is ignored.

Using Transparent Media

Procedure

1. Load transparent media to the printer.

Prefer to "2-2 Loading and Cutting Off Media" and load the media on the machine.

2. Set the media type to "CLEAR."

4. Make the setting for the location of the right edge of the media.

Press . Press . The print heads move to the position now set.

Open the front cover.

Description

The media width can be sensed automatically for opaque media, but not for transparent media. This means that the width and mounted location of the media must be set manually. Incorrect settings may cause ink to be applied at locations where no media is present.

SHEET POS. CANCEL

To quit making settings at the [SHEET POS.] menu, use To select "CANCEL," then close the front cover and press ENTER . ₽

Note that to keep the heads from drying out, the [SHEET POS.] menu ends automatically after a certain interval, even if you're still making settings there.

The settings for the media width and start position made here are effective only when [SHEET TYPE] is set to "CLEAR." Selecting "OPAQUE" disables the settings, although the setting values are saved in memory. Choosing "CLEAR" again enables the values set previously.

Preventing Media from Coming Loose

Procedure

Description

The platen uses suction to grip the media and keep it stable. When media comes loose from the platen because it is warped or wrinkled, increasing the suction force may help correct the problem. Conversely, when the media is flimsy and cannot move smoothly, reducing the suction force may help.

When set to "AUTO," the suction force is automatically adjusted to the optimal level for the media width.

You can also make this setting on the computer. When you have made the setting on the computer, the computer's setting is used and the printer's setting is ignored.

Default Setting

Speeding Up Printing for Narrow Media

Procedure

Description

Reducing the width of head movement to the minimum required width speeds up printing. This is effective mainly when you use media of narrow width. Because the media moves more quickly, the effectiveness of the media heating system also changes. It may be necessary to change the preset temperatures.

"SHEET" matches the range of head movement to the width of the media. The parameters for the media heating system change according to the media width.

"OFF" matches the range of head movement to the printing data. Movement is limited to the minimum amount necessary, and this can be expected to yield the fastest printing. Note, however, that because the speed of media movement is no longer constant, colors may be uneven.

"FULL" makes the speed of media movement constant at all times. Printing speed is slower, but printing quality is the most stable.

Description

Ink tends to collect on the surface of the heads when you use media prone to build up a static charge, when the ambient temperature is low, and at other such times. Under some conditions, this ink may be transferred to the media. Use this feature at such times. The ink buildup is removed as printing is performed.

When this is set to "PAGE," automatic cleaning is performed every time before printing starts.

When this is set to a value from "1min" to "99min," automatic cleaning is performed when the cumulative printing time reaches the value you set here.

When this is set to "NONE," no automatic cleaning is performed.

Using this feature results in longer printing times. Also, when this is set to a value from "1min" to "99min," printing pauses and so colors may be uneven.

Determining What Happens When an Ink Cartridge Is Empty

Procedure

Description

This setting determines whether printing starts on receipt of printing data when an ink cartridge is empty. When this is set to "STOP," printing does not start until the ink cartridge has been replaced. When this is set to "CONT.," printing starts and continues until the ink remaining inside the machine is used up. Regardless of the setting made for this menu item, we recommend replacing the ink cartridge immediately whenever a cartridge becomes empty.

Is the cover closed securely?

The take-up and feed units do not operate unless the cover is securely closed.

Is media loaded correctly?

Make sure the media is passed through the guide roller and dancer rollers correctly.

The Dryer Doesn't Warm Up

Is the main power switch for the dryer turned on?

Turn on the main power switch for the dryer.

Is the dryer's power cord connected?

Connect the power cord securely.

Is media loaded?

The dryer does not warm up to the preset temperature when set up is dark (unless the default setting has been changed). Load media, press set up, and wait for the machine to warm up.

Printed Results Are Coarse or Contain Horizontal Stripes

Do the print heads show dot drop-out?

Carry out a printing test and make sure no dot drop-out occurs. If dot drop-out is present, perform head cleaning.

- ☞ p 51 "Printing Tests and Cleaning"
- ☞ p 62 "When Head Cleaning Is Not Effective"

Have you carried out feed correction?

Large misalignment in the amount of feed of the media may result in printing that seems coarse or contains horizontal stripes. Either make the setting on the computer to match the type of media you're using, or make the setting for correction on the printer.

p 86 "Performing Feed Correction to Alleviate Horizontal Bands and the Like"

Have you carried out bidirectional correction?

When you are performing bidirectional printing, use the [ADJUST BI-DIR] menu item to carry out correction. The optimal adjustment value may vary, depending mainly on the thickness of the media. Set or select an adjustment value that is suited to the media.

p 83 "Correcting for Misalignment in Bidirectional Printing"

Is the media heating system at a suitable temperature?

If the ink forms lumps or smudges, raise the temperature. Note, however, that a temperature that is too high may degrade the media or cause it to wrinkle.

p 48 "Settings of the Media Heating System"

Is the temperature of the room too low?

The media heating system may not warm up sufficiently when the temperature is 20°C (68°F) or lower. Also, even when the media heating system reach their preset temperatures, adequate effectiveness may not be apparent if the media is thoroughly chilled. Before printing, allow the media to come to room temperature.

Is the print mode suitable?

If attractive printing is impossible even when the print heater, preheater, and dryer are at a high temperature, try using a higher-quality print mode.

Depending on the media, smudging may occur when using a high-quality print mode, and results may also vary greatly depending on the settings of your RIP program (such as the color-profile selection). Make settings suited to the media you're using.

Is the printer installed in a level and stable location?

Never install the machine in a location where it is tilted or where it may wobble or experience vibration. Also make sure that the print heads are not exposed to moving air. These factors may lead to missing dots or reduced printing quality.

Is the media loaded and set up correctly?

Are the settings for the [PRESET] menu item appropriate?

If the settings selected with the [PRESET] menu item are not suitable for the type of media, printing may be adversely affected. Choose settings optimized to the media you're using.

p 80 "Saving Optimized Media Settings As Preset Values"
p 81 "Loading a Saved Preset"

Colors Are Unstable or Uneven

Is the media wrinkled?

If the media is wrinkled and comes loose from the platen, colors may be uneven or printing reduce may suffer.

p 113 "Media Wrinkles or Shrinks, or Feed Is Unstable"

Was printing paused partway through?

When printing is paused, the coloring at the seam may be altered when printing resumes. Avoid pausing printing. Printing pauses when ink remaining inside the machine runs out. Before you perform lengthy printing, check the amount of ink remaining in the ink cartridges, and immediately replace any cartridge that becomes empty.

Printing may also pause when data is not sent from the computer quickly enough. We recommend not performing any other tasks with the computer while printing is in progress.

Are the operating parameters set to appropriate values?

Depending on the settings for such menu items as [FULL WIDTH S] and [PERIODIC CL.], uneven colors may occur. If the settings have been changed, try restoring them to their default values.

p 90 "Speeding Up Printing for Narrow Media"

P 91 "Keeping Media from Being Soiled by Ink Drips"

Is the printer installed in a level and stable location?

Are the settings for the [PRESET] menu item appropriate?

If the settings selected with the [PRESET] menu item are not suitable for the type of media, printing may be adversely affected. Choose settings optimized to the media you're using.

p 81 "Loading a Saved Preset"

The Media Becomes Soiled When Printed

Do the print heads contact the media?

The height of the print heads may be too low. Also, if the media is not loaded and set up correctly, it may wrinkle or come loose and strike the heads.

- p 113 "Media Wrinkles or Shrinks, or Feed Is Unstable"
- P 82 "Adjusting Head Height to Match Media Thickness"

Are the print heads dirty?

The following may cause ink to drip on the media during printing.

- Buildup of fibrous dust (lint) around the heads
- Ink transferred to the heads due to rubbing against the media.

If this happens, clean the heads using the cleaning kit. We recommend carrying out periodic head cleaning.

@ p 64 "Cleaning the Heads Using the Cleaning Kit"

Are the pinch rollers dirty?

Periodically clean the pinch rollers.

The Media Jams

If an error message is displayed because the media has jammed, immediately correct the problem. Failure to do so may damage the print heads.

☞ p 116 [MOTOR ERROR CAP PRINT HEADS]

☞ p 116 [MOTOR ERROR TURN POWER OFF]

Is the media warped or wrinkled?

Many factors can cause warping or wrinkling. Refer to the following and correct the problem.

@ p 113 "Media Wrinkles or Shrinks, or Feed Is Unstable"

Is the height of the print heads too low?

Try raising the heads higher. Media may inevitably warp or wrinkle slightly, so adjust the height of the heads to take this into account.

@ p 82 "Adjusting Head Height to Match Media Thickness"

Are the media clamps installed with the left and right sides oriented correctly?

The media clamps have distinct left and right sides. Make sure of the orientation and install correctly.

@ p 44 Procedure 7 on "How to Load Media"

The Media Cannot Be Taken Up Smoothly

Is media feed unstable?

Various factors can make media feed unstable. Refer to the following and correct the problem.

@ p 113 "Media Wrinkles or Shrinks, or Feed Is Unstable"

A variety of problems can occur if the media feed is not smooth. This can cause such problems as poor printing quality, contact with the media by the print heads, misaligned positioning, media jams, or poor take-up. Take action as follows.

Media Wrinkles or Shrinks

Is the media loaded and set up straight and securely?

Feed is not smooth when the media is not straight or tensioned unevenly on the left and right. Reload the media.

Is the feed dancer roller level?

If it is not level, the media may become crooked or wrinkle. Reload the media using the media gauge.

Is media loaded correctly?

Make sure the media is passed through the guide roller and dancer rollers correctly.

Is the positioning of the loaded media displaced to the left or right?

Smooth feed is not possible when the positioning of the loaded media is displaced to the left or right. Reload the media using the media gauge.

Was loaded media allowed to stand for some time?

Media may shrink or wrinkle if it is heated for an extended time. When printing ends, switch off the sub power or remove the media.

Was the media loaded while the media heating system is hot?

Loading media after the media heating system has warmed up causes the temperature of the media to rise suddenly, which may cause the media to shrink or wrinkle during printing. Before loading media, switch off the sub power and allow them to cool.

Is the temperature of the media heating system too high?

Is the roll media sagging?

The Media Is Not Straight

Is the media loaded and set up straight and securely?

Feed is not smooth when the media is not straight or tensioned unevenly on the left and right. Reload the media.

Is the feed dancer roller level?

If it is not level, the media may become crooked or wrinkle. Adjust the position of the balance weights to match the width of the media.

Is media loaded correctly?

Make sure the media is passed through the guide roller and dancer rollers correctly.

Is the positioning of the loaded media displaced to the left or right?

Smooth feed is not possible when the positioning of the loaded media is displaced to the left or right. Reload the media using the media gauge.

Media Feed Is Not Smooth

Do the media or the dancer rollers strike some other object?

Make sure the media and the dancer rollers do not touch anything else. This may affect printing, even when feed appears to be smooth.

Is the media too thick?

Media that is too thick may not only cause unstable feed, but may scrape the print heads, resulting in malfunction. Never use such media.

Are the grit rollers dirty?

Check to make sure the grit rollers are free of buildup of foreign material such as media scraps.

If the print-head carriage stops over the platen, take action immediately to prevent the heads from drying out.

What to Do First

If the Heads Still Do Not Move

If the heads still do not move, carry out the following emergency response measure, then contact your authorized Roland DG Corp. dealer.

- 1. Switch off the main power and detach the right side cover.
- 2. Open the front cover.
- 3. Gently move the cap unit by hand to the position shown in the figure.

4. Gently move the print heads by hand as far as the standby position.

5. Insert the head-unit tool into the hole on the bottom of the machine and turn gently. The print heads descend.

Head-unit tool

6. Make the guides at the edges of the print heads line up with the printing heads at the edges of the cap unit. Turn the tool further to bring the heads near the cap unit.

7. When the heads make contact with the cap unit, turn the tool three more turns.

Make sure the print heads are capped tightly.

These are the main messages that appear on the machine's display to prompt correct operation. They do not indicate any error. Follow the prompts and take action accordingly.

[CANCELED FOR WIPER PROTECTION]

Operation stopped because the maintenance liquid has run out completely.

Press ENTER clears the error message, but printing cannot be executed. Execute the printer's [MAINTE. LIQUID] menu item and replace the maintenance liquid cartridge with a new one. If the machine is allowed to stand with the error uncorrected, the print heads may dry out and become damaged.

[CHECK THE FEED UNIT]

The feed system stopped without feeding out any media.

If media has run out, stop printing and load new media.

[DATA ERROR CANCELING...]

Output was stopped because a problem was found in the data received.

Operation cannot be continued. Check for problems with the connector cable or the computer, then redo the operation, starting with reloading the media.

[FEED UNIT LOCKED]

Printing stopped automatically because the feed system stopped.

Press I to clear the error message. Eliminate the cause that made the feed system stop, then carry out the next printing operation.

[HEATING TIMEOUT CONTINUE?]

The preheater or print heater did not reach the preset temperature.

This occurs because the temperature of the location where the machine is installed is too low. We recommend raising the temperature. To quit printing, hold down (SET UP) for one second or longer. To continue waiting for the temperature to rise, press (ENTER). To start printing immediately, press (PAUSE).

[MOTOR ERROR CAP PRINT HEADS]

A motor error occurred.

Eliminate the cause of the error, then press **ENTER**. The heads move to the standby position. After the heads have moved, switch off the sub power. If the machine is allowed to stand with the error uncorrected, the print heads may dry out and become damaged.

This error may be caused by such factors as a mistake in loading the media, a media jam, or an operation that pulls the media with excessive force.

The media is loaded incorrectly.

Check how the media is threaded through the rollers. Also make sure the AUTO switches for the feed and take-up units are set correctly.

The media has jammed.

Carefully remove the jammed media. The print heads may also be damaged. Perform head cleaning, then perform a printing test and check the results.

The media was pulled with excessive force.

Excessive tension was applied to the media, and additional action is necessary to recover from this state. First, move the loading lever to the rear and open the cover for the feed and take-up units. Adjust the media to create a small amount of slack, then switch on the sub power.

[MOTOR ERROR TURN POWER OFF]

A motor error occurred.

Operation cannot be continued. Switch off the sub power. Next, eliminate the cause of the error, then immediately switch on the sub power. If the machine is allowed to stand with the error uncorrected, the print heads may dry out and become damaged.

[NO MAINTENANCE LIQUID]

The maintenance liquid cartridge is empty.

Press ENTER to clear the error message. Execute the printer's [MAINTE. LIQUID] menu item and replace the maintenance liquid cartridge with a new one. If the machine is allowed to stand with the error uncorrected, the print heads may dry out and become damaged.

[PINCHROLL ERROR LOWER PINCHROLL]

was pressed without first lowering the pinch rollers.

Press any key to clear the error. Pull back the loading lever, then press \overline{SETUP} .

The pinch rollers were raised while SET UP was illuminated.

The error is cleared automatically after a short wait. Never move the loading lever while printing is in progress.

[SERVICE CALL XXXX]

An unrecoverable error occurred, or part replacement that must be performed by a service technician is required.

Note the number displayed, then switch off the sub power. After you switch off the power, inform your authorized Roland DG Corp. dealer of the number that appeared on the display.

[SHEET SET ERROR SET AGAIN]

SET UP was pressed even though no media is loaded. Press any key to clear the error. Load media and pull back

the loading lever, then press SETUP.

Transparent media was loaded even though [SHEET TYPE] is set to "OPAQUE."

The positioning of the loaded media is displaced to the left.

Press any key to clear the error. Reload the media at the correct position, then press SETUP.

The platen is dirty.

Press any key to clear the error. The machine cannot sense the width of the media because of soiling. Clean the platen.

[TEMPERATURE ISTOO HIGH]

The temperature of the location where the machine is installed has risen above the ambient temperature at which the machine can operate.

Operation cannot be continued. Switch off the sub power. Bring the installed location to a temperature at which operation is possible (20 to 32°C) and allow the machine to come to room temperature, then turn on the power.

[TEMPERATURE ISTOO LOW]

The temperature of the location where the machine is installed has fallen below the ambient temperature at which the machine can operate.

Operation cannot be continued. Switch off the sub power. Bring the installed location to a temperature at which operation is possible (20 to 32°C) and allow the machine to come to room temperature, then turn on the power.

[WRONG CARTRIDGE]

A cartridge that cannot be used was installed.

Remove the cartridge to clear the error. Use a cartridge of the specified type.

[WRONG WIDTH UNDER 1220mm (or 48")]

The width of the loaded media is too narrow.

Press ENTER to clear the error. Note, however, that performing printing without making any changes causes the media to be fed incorrectly, which may result in malfunction or damage to the machine. Replace with media of usable size.

Chapter 6 Specifications

Conditions for Usable Media

Media width

1220 to 2641 mm (48 to 104 inches)

Roll outer diameter (A) Maximum 250 mm (9.8 inches)

Paper pipe (core) inner diameter (B) 76.2 mm (3 inches)

Media thickness (C) Maximum 1.0 mm (39 mil)

Roll weight Maximum 100 kg (220 lb.)

Other conditions

Media such as the following cannot be used.

- Media whose end is attached to the paper pipe (core)
- \succ Media which is severely warped or which has a strong tendency to reroll
- \succ Media that cannot withstand the heat of the media heating system
- \succ Media that cannot withstand the tensioning of the media take-up or feed system
- ➤ Media whose paper pipe (core) is bent or crushed
- > Media that bends under its own weight when loaded

This machine cannot necessarily print every kind of media. When selecting media, be sure to carry out testing in advance to make sure that satisfactory printing quality is obtained.

Printing Area and Margins

*1 The amount of margin can be changed by using (HASE POINT).

*2 Margin length required by the media take-up and feed systems.

*3 Margin set automatically (default value; for media whose width is detectable)

6-3 Locations of the Power Rating and Serial Number Labels

Serial Number

This is required when you seek maintenance, servicing, or support. Never peel off the label or let it get dirty.

Power Rating

Use an electrical outlet that meets the requirements for voltage, frequency, and amperage given here.
